

Steinway & Sons MODEL A

The Steinway & Sons Model A loudspeaker provides the acclaimed sound performance from a speaker design optimized for room-friendly placement against a wall. This makes the Model A the first choice when the room shape or interior demands a more space-saving setup, from living rooms and media rooms to apartments, penthouses, or yachts, as well as rooms without the space for separate woofers.

POWERFUL SOUND FROM A SPACE-SAVING LOUDSPEAKER

While the company's own Air Motion Transformer tweeter, dedicated midrange driver, and two large woofers provide outstanding clarity, resolution, and a deep yet defined bass, the shallow closed-cabinet construction takes advantage of the speaker placement near the wall. The result is a room-filling sound with a fast and tight impulse response, suited to every musical style from pure acoustic recordings to dynamic sound effects and large orchestral pieces.

OUTSTANDING CLARITY AND BASS

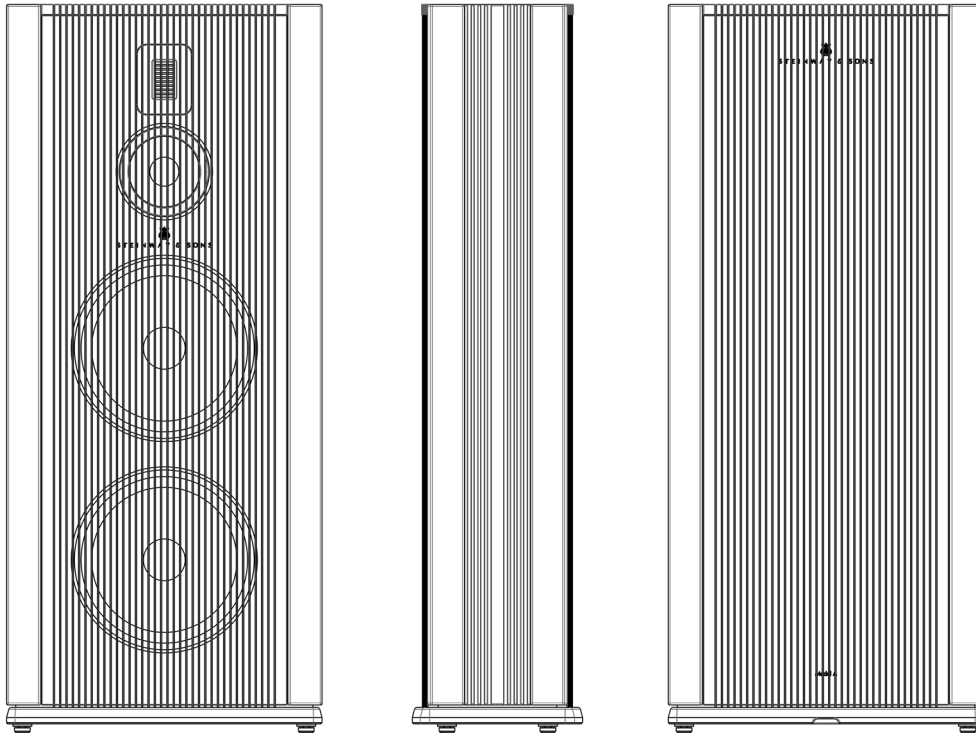

No compromises have been made in the loudspeaker technology: The company's own Air Motion Transformer tweeter and 6.5" midrange driver provide outstanding clarity and resolution, while two powerful 12" woofers deliver deep, yet defined bass. Despite the very shallow closed-cabinet design, the large diameter of two woofers combined allows a stunningly powerful and dynamic bass performance.

QUALITY ON THE HIGHEST LEVEL

The distinctive design with black piano finish, black strings, and matte gold details resembles the famous Steinway & Sons pianos, while each loudspeaker is assembled and finished by hand in Denmark. The Model A loudspeaker comes as standard in matte black with high gloss black side panels and matte gold details, and can be customized with polished gold details as well as other lacquers and finishes, on request and special order.

IDEAL AMPLIFIER MATCHING

Steinway Lyngdorf's integrated system approach provides the ideal amplifier match and ensures the best system performance. The Model A has been designed with the Steinway & Sons A1 or A2 digital power amplifiers as an integral part of the system, with the Steinway & Sons stereo or surround processors performing the active crossover in the digital domain. Additionally, RoomPerfect™ will adapt the Model A to the room acoustics and always ensure the best sound performance in any room.

SPECIFICATIONS

Description:	Full-range in-room loudspeaker
Tweeter:	Air Motion Transformer, Kapton foil, Neodymium magnet
Midrange:	165mm / 6,5", anodized aluminum cone, vented magnet with copper clad pole piece, 35mm / 1,4" two-layer voice coil, molded aluminum basket
Woofer:	Two 30 cm / 12", anodized aluminum cone, vented double magnet with copper ring, 75mm / 3" four-layer voice coil, molded aluminum basket
Enclosure:	Closed cabinet, aluminum and MDF, steel base
Frequency range:	25 – 22,000 Hz (-3 dB)
Amplification:	A1 or A2 Amplifier, 2 x 400 watt per loudspeaker
Amplification channels:	2 per loudspeaker
Max SPL@1m:	114 dB
Crossover:	Woofer/Midrange: Digital crossover stored in processor, 200 Hz. Midrange/Tweeter: Passive crossover, 2200Hz
Connections:	Neutrik speakON
Placement:	Floor-standing, against the wall
Dimensions (W x H x D):	500 x 1150 x 270 mm / 19,7 x 45,3 x 10,6 inches (incl. base plinth)
Weight:	76 kg / 168 lb
Finish:	Black piano finish, custom finishes available
